XXI. Nous n'avons donc qu'à égaler ces forces accélératrices avec les accélerations actuelles que nous venons de trouver, & nous obtiendrons les trois équations fuivaites :

$$P - \frac{1}{q} \left( \frac{dp}{dx} \right) = \left( \frac{du}{dt} \right) + u \left( \frac{du}{dx} \right) + v \left( \frac{du}{dy} \right) + w \left( \frac{du}{dz} \right)$$
$$Q - \frac{1}{q} \left( \frac{dp}{dy} \right) = \left( \frac{dv}{dt} \right) + u \left( \frac{dv}{dx} \right) + v \left( \frac{dv}{dy} \right) + w \left( \frac{dv}{dz} \right)$$
$$R - \frac{1}{q} \left( \frac{dp}{dz} \right) = \left( \frac{dw}{dt} \right) + u \left( \frac{dw}{dx} \right) + v \left( \frac{dw}{dy} \right) + w \left( \frac{dw}{dz} \right)$$

Si nous ajoutons à ces trois équations premièrement celle, que nous a fournie la confidération de la continuité du fluide :

Yann Brenier (CNRS)

2015 PIMS MARSDEN MEMORIAL LECTURE

EPFL. 10 juin 2015 5 / 23

・ ロ ト ・ 同 ト ・ 目 ト ・ 目 ト

$$\left(\frac{dq}{dt}\right) + \left(\frac{d.qu}{dx}\right) + \left(\frac{d.qv}{dy}\right) + \left(\frac{d.qw}{dz}\right) = \circ.$$

Si le fluide n'étoit pas compressible, la densité q seroit la même en Z, & en Z', & pour ce cas on auroit cette équation :

$$\binom{du}{dx} + \binom{dv}{dy} + \binom{dw}{dz} = 0.$$

qui est aussi celle sur laquelle j'ai établi mon Mémoire latin allégué ei-dessure

EPFL, 10 juin 2015 6 / 23

## $\tau(t) = t^2/2, \quad (\tilde{q}, \tilde{p}, \tilde{v})(t, x) = (q(\tau(t), x), p(\tau(t), x), \tau'(t)v(\tau(t), x))$

(so that  $\tilde{v}(t, x)dt = v(\tau, x)d\tau$ )

Yann Brenier (CNRS)

2015 PIMS MARSDEN MEMORIAL LECTURE

EPFL, 10 juin 2015 7 / 23

# $\tau(t) = t^2/2, \quad (\tilde{q}, \tilde{p}, \tilde{v})(t, x) = (q(\tau(t), x), p(\tau(t), x), \tau'(t)v(\tau(t), x))$ (so that $\tilde{v}(t, x)dt = v(\tau, x)d\tau$ )

 $\partial_t \tilde{q} + \operatorname{div}(\tilde{q}\tilde{v}) = 0, \quad \partial_t(\tilde{q}\tilde{v}) + \operatorname{div}(\tilde{q}\tilde{v}\otimes\tilde{v}) = -\operatorname{grad}\tilde{p}: \quad \rightarrow$ 

Yann Brenier (CNRS)

2015 PIMS MARSDEN MEMORIAL LECTURE

EPFL, 10 juin 2015 7 / 23

 $\tau(t) = t^2/2, \quad (\tilde{q}, \tilde{p}, \tilde{v})(t, x) = (q(\tau(t), x), p(\tau(t), x), \tau'(t)v(\tau(t), x))$ 

(so that  $\tilde{v}(t, x)dt = v(\tau, x)d\tau$ )

 $\partial_t \tilde{q} + \operatorname{div}(\tilde{q}\tilde{v}) = 0, \quad \partial_t(\tilde{q}\tilde{v}) + \operatorname{div}(\tilde{q}\tilde{v}\otimes\tilde{v}) = -\operatorname{grad}\tilde{p}: \quad \rightarrow$ 

 $(\partial_{\tau} q + \operatorname{div}(qv))\tau' = 0, \quad \tau'' qv + (\tau')^2 [\partial_{\tau}(qv) + \operatorname{div}(qv \otimes v)] = -\operatorname{grad} p$ 

Yann Brenier (CNRS)

2015 PIMS MARSDEN MEMORIAL LECTURE

EPFL, 10 juin 2015 7 / 23

 $\tau(t) = t^2/2, \quad (\tilde{q}, \tilde{p}, \tilde{v})(t, x) = (q(\tau(t), x), p(\tau(t), x), \tau'(t)v(\tau(t), x))$ (so that  $\tilde{v}(t, x)dt = v(\tau, x)d\tau$ )

 $\partial_t \tilde{q} + \operatorname{div}(\tilde{q}\tilde{v}) = 0, \quad \partial_t (\tilde{q}\tilde{v}) + \operatorname{div}(\tilde{q}\tilde{v}\otimes\tilde{v}) = -\operatorname{grad}\tilde{p}: \quad \rightarrow$ 

 $(\partial_{\tau}q + \operatorname{div}(qv))\tau' = 0, \quad \tau'' qv + (\tau')^2 [\partial_{\tau}(qv) + \operatorname{div}(qv \otimes v)] = -\operatorname{grad} p$ 

For small times,  $(\tau')^2 = t^2 = 2\tau \ll 1$ , while  $\tau'' = 1$ , we get an ASYMPTOTIC EQUATION after withdrawing the red terms.

Yann Brenier (CNRS)

2015 PIMS MARSDEN MEMORIAL LECTURE

EPFL. 10 juin 2015 7 / 23

## THE RESULTING "ASYMPTOTIC" EQUATION

$$\partial_{\tau} \boldsymbol{q} + \operatorname{div}(\boldsymbol{q}\boldsymbol{v}) = \boldsymbol{0}, \quad \boldsymbol{q}\boldsymbol{v} = -\operatorname{grad}\boldsymbol{p},$$

IS NOTHING BUT THE HEAT EQUATION, in the case of an "isothermal" fluid (i.e. as *p* is proportional to *q*),

$$\partial_{\tau} \boldsymbol{q} = \kappa \bigtriangleup \boldsymbol{q}$$

## FINAL COMMENTS

The Born-Infeld model of Electromagnetism is very geometric and has known a strong revival in high energy physics (string theory) in the 90s. Once set up in the framework of special relativity and properly augmented by Noether's extra conservation laws, it can be expressed as a Galilean system very much in the style of Euler's hydrodynamics.

## FINAL COMMENTS

The Born-Infeld model of Electromagnetism is very geometric and has known a strong revival in high energy physics (string theory) in the 90s. Once set up in the framework of special relativity and properly augmented by Noether's extra conservation laws, it can be expressed as a Galilean system very much in the style of Euler's hydrodynamics. Furthermore, some diffusion equations, apparently very remote from "first principles", can be (formally) derived from the (augmented) BI equations in just one step.
